

Amendment to the Specification

[0034] Flexible circuit pad 106 also may include electrical or physical disposal mechanisms 110 that require a new flexible circuit pad to be used with each treatment. Alternatively, the disposal mechanism 110 may allow a certain flexible circuit pad a certain number of times and/or be used by a certain patient. Therefore, the disposal mechanism 110 may prohibit undesirable re-usage of the flexible circuit pad 106, and therefore facilitate sanitary usage of flexible circuit pad 106 both for an individual patient and across numerous patients.
